PRAGATI KUMAR

Software Engineer | Applied AI • Secure Agent Systems • Enterprise Delivery

pragati.kumar2019@gmail.com • linkedin.com/in/pragatikr • github.com/pragati1698 • pragati1698.github.io

SUMMARY

Software engineer with 4+ years across enterprise software, applied AI, Python automation, and distributed systems. Technical lead for a generative AI employee knowledge assistant, with experience in agent development, permission testing, and cross-team security governance. Built Kubernetes testing infrastructure supporting 200 parallel sessions. Focused on secure agent systems and reliable enterprise delivery.

TECHNICAL SKILLS

Languages & APIs: Python, Java, JavaScript/TypeScript, SQL, REST APIs, Spring MVC/Boot, Hibernate

AI & integrations: Copilot Studio, LLM APIs, Azure AI Foundry, SharePoint, Power Automate, Playwright

Cloud & systems: Azure, AWS, Kubernetes, Docker, CI/CD, Selenium, Appium, Git

Data: SQL Server, PostgreSQL, MySQL, Pandas, Power BI

PROFESSIONAL EXPERIENCE

Software Engineering & Applied AI (IT Analyst 2) | Connecticut Department of Transportation | Feb 2024–Present

- Technical lead for DOTBOT 2.0, an enterprise knowledge assistant built with Microsoft Copilot Studio, generative AI, and SharePoint; among the first 20 individuals statewide to publish a Copilot Studio agent with generative AI enabled.
- Coordinated with Microsoft and state IT security stakeholders on AI governance, permission-aware knowledge retrieval, publishing requirements, and application support ownership.
- Developed an AI work-intake agent using Copilot Studio, SharePoint, and Power Automate to capture employee requests and support routing to IT teams.
- Built Python/Selenium tooling to collect Power BI workspace metadata into SQL Server; developed an NLP pipeline analyzing 1,000+ employee survey responses.

Quality Engineer | Crestron Electronics | Jan–Dec 2023

- Built a distributed Selenium execution platform on Kubernetes supporting 200 parallel sessions, reducing one regression workflow from 6 hours to 3 minutes.
- Developed firmware validation and API reliability automation across product lines.

Software Engineer | Larsen & Toubro Infotech (The Hartford) | Jan–Dec 2021

- Implemented Java backend components using Spring MVC and Hibernate for enterprise insurance workflows; built Appium automation for Android and iOS.

SELECTED PROJECT

Agent Hands | github.com/pragati1698/agent-hands

Built a Python/Playwright computer-use system separating live LLM workflow discovery from deterministic replay. Added typed capability contracts, code-owned action policy, checkpoint verification, human handoff, and sanitized evidence. Demo uses fictional data and a bounded test application.

EDUCATION & PROFESSIONAL DEVELOPMENT

M.S. Computer Science — Stevens Institute of Technology (2023), GPA 3.9/4.0 • B.E. Computer Science — Savitribai Phule Pune University (2020)

Microsoft Copilot Agents Architecture Bootcamp Graduate Badge — Global AI Community (Sep 2026)

Stanford University — Probability for AI, in progress (2026) • AWS Certified Cloud Practitioner
